Staff Paper Series No. 3
Department of Economics
Kansas State University
July, 1972

The following list of journals accepting and publishing agricultural economic manuscripts was prepared to assist authors in identifying and selecting an appropriate place to publish research results. Sixty-two of the current journals are listed with mailing addresses, a brief description of the type of articles accepted, and a designation of rigor and use of mathematics of published articles.

The description given is based on a scanning of recent issues therefore gives only a rough indication of the nature of the journal. Most of the journals report research that can be classified as to being theoretical, applied, or case studies:

Theoretical—articles in which the emphasis is on developing economic concepts or research techniques.

Applied—application of economic theory or research methodology to solving a specific problem.

Cases—observation, description, and implication of one or more economic units or phenomenon.
The rigor and mathematical rating was based upon casual observation of recent issues. A scale of ascending rank, 1 to 5, was used. Rigor was based upon the complexity and scope of problems and research techniques used, sophistication of the writing, and the eminence of the authors. Application of mathematics was based upon the extent and complexity of the use of mathematics as a research technique and reporting media.

A complete list including highly specialized journals and foreign journals was published in Economic Literature, Volume IX, Number 3, September, 1971.
